

ECO-HOUSE

is a reliable factory for the
production of round logs
and profiled beams

Eco-house is a reliable factory producing wooden house kits since 2009. Our customers order houses, banyas and hotels made of round logs and profiled beams and often with a full set of construction materials (lumber, inter-wall insulation, dowels, etc.). We supply our products throughout Russia and the near abroad.

ADVANTAGES OF COOPERATION WITH US:

- ❑ Transaction support from the customer's request to the completion of construction with a personal manager (nothing will pass by, everything is in the CRM system and we are always ready to help).
- ❑ Clear work plan, full awareness and control over each stage of the transaction through a general chat with our company's manager or a notification according to your choice.

ADVANTAGES OF COOPERATION WITH US:

- ❑ Your order within the deadlines set in the delivery schedule, even large volumes on time as we produce more than 10,000 m² of products per year.
- ❑ Preliminary calculation of the house kit price is free of charge, special bonus program.
- ❑ Practical, not emotional approach to solving problems.
- ❑ Unloading in solving current tasks, because we take on some of the tasks (project coordination with the designer, deliveries with the foreman, etc.). You only control the process.

ADVANTAGES OF COOPERATION WITH US:

- Increasing number of interested buyers, because our product range is constantly expanding (2015- profiled timber, 2019 - production of grooves and bales for window and door openings, our plan for 2020 – own sawing of boards and beams) and new services are being added (2014 – design, 2016 - packaging in bundles, 2019-support of export transactions).

For other countries' clients – a well-executed export transaction, since we work together with the Kirov Region Export Promotion Center.
